

NewtBuilder Naming Conventions

Simple asset naming rules for shot selection, masks, and speaking hints.

Main rule

Filename = who is visible in the image. Speaking tag = who should speak / get the mask.

Filename Pattern

<SHOT>_<VISIBLE-CHARACTERS>_<VERSION>.png

Use uppercase character tokens in the filename. For group shots, list characters left to right as they appear in the frame.

Shot Prefixes

CU Character one-shot / closeup.

MS Medium two-shot with two visible characters.

WS Wide or group shot with multiple visible characters.

INS Insert shot, cutaway, prop, or action beat.

Visible Character Tokens

MAX Max is visible.

PIP Pip is visible.

GUEST Any guest character is visible.

Good Examples

CU_MAX_01.png

Max closeup

CU_PIP_01.png

Pip closeup

CU_GUEST_01.png

Guest closeup

MS_MAX-PIP_01.png

Max left, Pip right

WS_MAX-PIP-GUEST_01.png

All characters visible

INS_NOTEBOOK_01.png

Insert/cutaway

Speaking Tag

@name

Add one optional speaking tag after upload when a group image should favor a specific active speaker. This helps mask placement and asset selection, but it does not replace filename roles.

@Max Use when Max is the active speaker.

@Pip Use when Pip is the active speaker.

@DetectiveCat Specific guest names are treated as guest.

Quick reminder

Keep filenames consistent. Use tags only for the active speaker.

If a mask is wrong, check filename order first.
